UCLA Joe C. Wen School of Nursing

700 Tiverton Avenue
Factor Building, room 3-948
Los Angeles, CA 90095-1702

Dear Distinguished Teaching Award Selection Committee,

The University of California Joe C. Wen School of Nursing (SON) highly recommends Charlotte Bryant, BS, RN, for the University of California Los Angeles Teaching and Learning Center's Teaching Assistant Award. Charlotte was an outstanding student in SON's undergraduate program and has now full circle returning to the school for her Doctor of Philosophy in Nursing.

Charlotte is an exemplary Teaching Assistant (TA) for the School of Nursing because she is highly capable, a graduate of the Bachelor of Science program, brings strong clinical experience in high-acuity settings such as intensive care and emergency care, and consistently applies active and collaborative learning strategies to her teaching.

Charlotte serves as a TA for N150A, Fundamentals of Professional Nursing I, and N150B, Fundamentals of Professional Nursing II, foundational courses for nursing practice. She teaches both the Bachelor of Science (BS) and Master's Entry Clinical Nurse (MECN) cohorts, totaling 126 students. Using an active learning approach, she replaces traditional lecture with case studies and clinical judgment questions that students discuss, apply, and reflect on in small groups, then present their key insights and learning takeaways to the entire class (Freeman et al., 2014; Prince, 2004; Dunlosky et al., 2013). Students love participating actively in their learning in a fun environment. Charlotte is an excellent creator, facilitator, and stimulator of clinical learning with this pedagogical approach.

Embedded in her presentations are case-based learning scenarios in which students identify problems, prioritize care, and justify nursing interventions, promoting active engagement, participation, and critical thinking. Student feedback has been overwhelmingly positive, with students reporting improved ability to apply theory to real-world practice. Charlotte enhances learning by incorporating authentic case scenarios from her experience as a critical care and emergency nurse, aligning with evidence that nursing education benefits from experiential, case-based, and reflective learning to support clinical judgment (Benner et al., 2010).

Charlotte is an effective Teaching Assistant because she is fully present and responsive to student learning needs in every class and serves as an outstanding role model for School of Nursing students to emulate.

UCLA Joe C. Wen School of Nursing

700 Tiverton Avenue
Factor Building, room 3-948
Los Angeles, CA 90095-1702

Sincerely,

Glenda Totten

Glenda Totten, DNP, RN, CNS, PHN

Adjunct Assistant Professor
Assistant Program Director, BS and MECN Program
gttotten@sonnet.ucla.edu
cell 562.346.6053

My teaching approach is grounded in identifying barriers to student learning and implementing strategies that promote clarity and student success. Across multiple courses in the UCLA School of Nursing, I have taken an active role in shaping instructional practices, course logistics, and student support systems to foster equitable and effective learning environments.

One of my most consistent teaching practices is using student performance and feedback as data to guide instruction. For example, in a public health nursing course, several students did not pass the medication math assessment on their first attempt. Rather than treating this solely as an assessment outcome, I examined the most frequently missed questions to identify patterns of misunderstanding. Based on this analysis, I created a targeted review presentation (Appendix A) that walked students through the common errors and strategies for approaching similar problems in the future. I then hosted a review session focused on process-based learning strategies, rather than simply providing correct answers. Students shared that this approach clarified their misunderstandings and helped them feel more confident on subsequent attempts.

I have also worked to improve course infrastructure and access to learning by identifying elements that created unnecessary stress for students and instructors. During a Public Health course with a required clinical training component, students needed certificates verifying completion of external online training. I recognized that the existing distribution method could be streamlined and proposed an alternative system that enabled students to access and download their certificates independently, reducing delays and simplifying the process for the instructional team. This change improved both the student experience and the course workflow.

Similarly, in a fundamentals of nursing course, students reported difficulty accessing multiple quiz attempts in the Elsevier platform, a supplemental resource used for foundational nursing education. The existing system required manual assignment for individual students, which was not feasible in a class of over 130 learners. I took the initiative to explore the platform's options and contacted Elsevier representatives to identify a solution that allowed multiple attempts for all students. This resolved student concerns, reduced instructor workload, and ensured equitable access to practice opportunities. This experience allowed me to engage directly with educational technology to mitigate structural barriers to learning.

Across all courses, I also work to improve instructional clarity and transparency. I regularly monitor student emails, office-hour conversations, and in-class questions to identify areas of confusion, then revise assignment descriptions and course website language accordingly. When students in a previous quarter noted that assignment deadlines and formats felt unclear, I implemented a weekly end-of-class recap in the following quarter that reviewed key content, upcoming deadlines, and expectations, and provided time for questions. This small change significantly reduced student anxiety and improved preparedness.

I also focus on helping students develop discipline-specific learning strategies, particularly in high-stakes assessment environments. In Fundamentals of Nursing, I observed that many students understood the content conceptually but struggled with how questions were written,

especially since quizzes mirrored the format of the National Examination for Registered Nurses (NCLEX-RN). In collaboration with the course instructor, I incorporated test-taking strategies into a final exam review session (Appendix B). Using evidence-based resources, I taught students how to analyze question structure, identify distractors, and apply critical thinking strategies to multiple-choice questions. This approach addressed not only what students were missing but *why* they were missing it, helping them become more effective and confident test-takers.

Finally, I strive to incorporate active and applied instructional methods. When given the opportunity to deliver a lecture in the Fundamentals of Nursing course, I intentionally designed the session to reflect student feedback I had observed throughout the quarter. I minimized slide text, used clear visuals, and incorporated a small-group case study that allowed students to apply theory to a clinical scenario (Appendix C). Students worked in groups to discuss and solve the case, followed by a class-wide debrief. Several students shared that this format helped them better understand the clinical relevance of the material and made the lecture more engaging.

Across all of these experiences, my teaching is guided by a commitment not only to supporting instruction but also to actively shaping learning environments so that students can thrive. This commitment is reflected in my student evaluations, in which students consistently describe my teaching as clear, organized, and approachable, and note that my responsiveness, advocacy, and ability to explain complex concepts helped them feel supported in their learning (Appendix D). These experiences collectively demonstrate my alignment with the Distinguished TA Award criteria and my ongoing dedication to inclusive, evidence-based instruction.

Education, at its core, is an act of drawing out, not simply filling up. This philosophy has shaped my identity as both a learner and an educator since childhood. As the daughter of a community college professor and a mother who served as an educator in our home, I was raised in an environment where learning was never about memorization alone, but about curiosity, questioning, and discovery. My father often reminded me that the Latin root of *education*, *educa*, means “to draw out,” and my parents modeled this belief by encouraging me to ask *how* and *why*, rather than simply accepting *what* was presented. As a homeschooled child, I learned early on that understanding comes from engagement, reflection, and the freedom to explore one’s own questions. These beliefs continue to serve as the foundation of my teaching philosophy today.

I first stepped into the role of educator at the age of eleven, when I began assisting my karate instructor in teaching elementary school students at the local YMCA. That experience taught me an early and enduring lesson: knowledge alone is not sufficient for teaching. I quickly realized that my understanding of a concept did not guarantee that others would understand it the same way. To teach effectively, I had to break down what I knew into building blocks, examine it from multiple angles, and reconstruct it in language and examples that made sense to someone else. In doing so, I discovered both the craft and the joy of teaching. Watching a child’s face light up when a concept finally clicked, particularly something they had struggled to grasp before, revealed to me the transformative power of education. It was in those moments of discovery and sheer joy that I knew I wanted to be an educator, no matter the setting.

Throughout my academic and clinical career, I have continually been drawn into teaching roles. As a medical scribe and later as a registered nurse, I was quickly asked to serve as a preceptor. In my undergraduate nursing program, I naturally fell into the role of a peer who studied the material in advance and then helped others understand it, often by rephrasing, reorganizing, and breaking complex information into more accessible forms. Each time I taught, my own understanding deepened, and my passion for education grew stronger. As an RN preceptor, I found immense fulfillment in guiding paramedic students, emergency department technicians, and new nurses, whether that meant helping someone place an IV for the first time or explaining a complex disease process in a way that finally made sense. Teaching became not just a role I filled, but a way to engage with and understand the world around me.

Equally formative in my development as an educator has been the influence of my own mentors. I have been privileged to learn from instructors, community college professors, nursing faculty, and clinical preceptors who truly embodied the meaning of “drawing out.” They saw my curiosity, supported me through moments of self-doubt, challenged me to think more deeply, and believed in me even when I struggled to believe in myself. Their guidance is the reason I am here today, pursuing a PhD with the goal of becoming a nursing professor. My greatest aspiration as an educator is to offer that same gift to others, to be the person I needed when I was in their place, and to support students as they discover their own potential.

This philosophy is also shaped by a deep commitment to equity and adaptability in teaching. Education is not, and cannot be, a cookie-cutter process. As the younger sibling of a brother

with autism, I learned early on that intelligence and understanding take many forms. While I approached problems in calculus by following a stepwise formula, my brother visualized structures in his mind, rotated them, and intuitively grasped the underlying logic of the problem. We were in the same class, learning from the same professor, yet our paths to understanding were completely different. This experience profoundly shaped how I view the learning process. It taught me that effective teaching requires recognizing and honoring the diverse ways students think, process, and engage with material.

As an educator, I strive to meet students where they are at, not where I assume they should be. I believe my responsibility is to understand how my students learn best, how they see the world, and what barriers may stand in their way. Only then can I truly “draw out” their knowledge and support their growth. This philosophy guides my work as a Teaching Assistant, where I view teaching as a reciprocal process. I consistently find that I learn as much from my students as they learn from me. Their questions, perspectives, and approaches challenge me to refine my own understanding and to continuously improve my teaching and nursing practice.

My goal as an educator is to cultivate learning environments that are inclusive, supportive, and intellectually challenging. To promote spaces where students feel seen, valued, and capable of success. I aim to foster curiosity, encourage critical thinking, and provide multiple pathways for understanding so that all students, regardless of background or learning style, can thrive. Teaching, to me, is both a responsibility and a privilege: the opportunity to shape not only what students know, but how they see and believe in themselves as learners and professionals.

Ultimately, I have the privilege to teach because others have invested in drawing knowledge, confidence, and curiosity out of me. I believe deeply and fundamentally in my responsibility to pass that same gift on to the next generations of learners. In this way, my teaching is both a continuation and a commitment to *educa*: to draw out what already exists within each student, and to help them discover the knowledge, curiosity, and potential within them.

Medication Math Remediation

Review Session

General Feedback

- Make sure to double-check the units on each problem as you finish
  - **E.g.**, is the pump being programmed in mg or **mL**?
  - Is time reported in hours or **hours and minutes**?
  - Is the question asking for dosage in mL or **mg**?

- Don’t forget to draw an arrow to the correct dosage on the insulin syringe **in addition** to writing the unit dosage.

- Don’t round until the **very end** of the problem (last step!)

Question 36 & 37

Tylenol #3 was ordered for patient q4-6 hours. Pt. weighs 98lbs.

- Tylenol #3 = Acetaminophen 300mg + Codeine 30mg

Calculate the *low and high safe dose range* of Codeine, given:

- Codeine safe dose range = 0.5 - 0.75 mg/kg/dose

Steps:

- Convert lbs to kg
  - 1lb = 2.2kg
  - 98lbs/2.2kg = 44.5454 kg

- Multiply the patient's weight (in kg) by the safe dosage range given (in mg/kg/dose)
  - 44.5454 kg * 0.5 mg/kg/dose = **22.27 mg** (low)
  - 44.5454 kg * 0.75 mg/kg/dose = **33.41 mg** (high)

NCLEX-Style Questions

What are they, and how do we approach them?

Types of NCLEX Questions

Elements

- Most NCLEX-style test questions tell you what they are asking about in the stem
  - e.g., with the prior question: laparotomy surgery

- Will often include keywords like
  - “most important”
  - “FIRST thing you should do”
  - “BEST thing to do”

Question Types

- Multiple Choice
- Multiple response (SATA)
- Hot Spot
- Fill in the blank
- Drag and Drop/Ordered

Prioritization

- Read the question (see what they are asking you, only answer based on what they tell you)
- ABCs
- ADPIE

Kaplan, 2025

Tips for Question Types

Multiple Choice

- Read the question (see what CONCEPT they are asking you, only answer based on what they tell you)
  - to help: read ONLY the question first (cover answer options!)
  - Find out what broad concept they are asking, picture it in your mind
  - THEN look at the answer options

- Elements to consider
  - always consider these elements in order of priority
  - ABCs (Airway, Breathing, Circulation)
  - ADPIE (Assessment, Diagnosis, Planning, Implementation, Evaluation)

Prioritization

- ASKGRAPH
  - Airway
  - Sepsis
  - K+ (potassium change)
  - Glucose (low)
  - Respiratory (lethargy/grunting in peds)
  - Altered Mental Status
  - Peritontis
  - Hemorrhage
    - moves beyond basic ABCs to identify more specific, critical issues that may require immediate attention.

Kaplan, 2025; NCLEX High Yield, 2021)

Tips for Question Types (2)

Select All that Apply Questions

- Treat each option as a true/false question
  - i.e., ask yourself if each answer option is a true or false statement
- Decide if the true or false statement applies or not
  - Analyze the question, reword in your own words
  - Then evaluate the answer option based on the cues in the question
- Make a definitive choice
  - Either keep or eliminate each option
- Stay confident in your first instinct
  - avoid second-guessing, as your first instinct is usually correct

General Advice

- The NCLEX is a lot about testing strategies, not just content
- They can ask you thousands of questions, but all the questions test a basic concept
- Identify that concept via the question (e.g., patient safety, etc.)
- Follow the prioritization methods, based on ABCs, ASKGRAPH, and ADPIE
- NCLEX nursing = a perfect world
  - perfect staffing, perfect resources
  - don't make choices based on what YOU would do in the hospital
  - only problem = what they tell you

Adapted from *Potter & Perry (Ch. 45), Welch's Hospital Diet Orders, and Enteral Nutrition Lecture (Professor Jackson, 2024)*

Nutrition & Enteral Feeding

N150A: Fundamentals I
October 30, 2025
Charlotte Bryant, BSN, RN

Case Study

Meet the Patient

- Mr. Lopez, 72 y/o M
- Admitted after a stroke (CVA) with mild right-sided weakness
- Alert, oriented, but with difficulty swallowing water on bedside screen
- Speech Language Pathologist recommends NPO + NG tube feeding
- Provider order: Intermittent NG tube feeding, standard formula, 250 mL every 6 hours

The First Feeding

- You check:
  - NG tube: secured at 60 cm mark
  - GRV: 120 mL, pH = 4.5
  - Abdomen: soft, bowel sounds present
  - Mr. Lopez: “A little nervous, but no nausea or pain.”
  - HOB = 20°

What should you do <u>before</u> starting the feed?

A) Start feeding right away
B) Elevate HOB to 30–45°
C) Call the provider about GRV 120 mL
D) Give a glass of water to help tolerance

Mid-Feeding Event

Halfway through the feeding, Mr. Lopez coughs and looks uncomfortable.

- O_2 sat drops from 96% → 90%
- He looks short of breath

What is your priority action?

A) Pause the feeding
B) Lower the HOB
C) Keep going since it's almost finished
D) Call the dietitian to change the formula

From Nursing 150B - Fundamentals of Nursing II, Winter, 2026

Our TA, Charlotte, was wonderful. She consistently answered questions clearly, stayed professional, and was always aligned and supportive of our professor. She was caring, approachable, and did an excellent job explaining concepts and offering clarification when we needed it.

She was very supportive and knows her stuff. I enjoyed her opinions and appreciated her help and willingness to take extra time when it came to clarifying certain topics before/after class. Our TA responded promptly to all our questions and always tried to help the students. We were fortunate to have such a good TA. Whenever we didn't understand something, she explained it step by step with patience, and she was always in the classroom early, ready to support us.

I genuinely love it when Charlotte lectures. She is very clear and provides excellent explanations and examples. Her lecture slides are not cluttered and are organized. She has been an excellent TA.

I really respect Charlotte because she shared so much knowledge and experience as both a nurse and a former student, which has greatly enhanced my learning. When Professor Totten asked her to lead the class, she carried herself with a level of confidence that I hope to have once I become a nurse. I always enjoyed listening to her stories, especially the one she shared during the oxygenation lecture. Parts of that story really strengthened my understanding of oxygenation and I wished she shared more stories with the class. Additionally, whenever students had questions, she always knew the answer and guided us to the proper resources.

Charlotte was a great addition to this course and I am glad she was our TA. She always replied to emails on time and was available to help the students when needed. Any time there was an issue with the course she was the first person who we spoke to and she always listened to our concerns.

Charlotte was such a great TA for my class! I hope she is considering becoming a professor because she is an amazing teacher and great at explaining concepts. I loved her lecture on nutrition and I also loved how organized and helpful she was in making sure this class ran smoothly. Now I am just hoping she is the TA for next quarter!

C. Bryant was extremely helpful at all times including during theory class, via email, and office hours. She always created a welcoming environment and answered all questions. She was a key tool in our theory course and often cleared any confusion for this course. She is a great TA.

I answered the section questions above as N/A because we did not have a separate section with Charlotte this quarter. However, I will say that she was an amazing TA, probably one of the best I've ever had. She was extremely knowledgeable and so warm and inviting. I felt she was very approachable, and whenever I spoke with her regarding the course, she was very

sweet and helpful. During the course, she gave about two lecture presentations, and I appreciated them so much. She was very good at presenting the information and answering questions whenever we had them. Overall, an amazing TA, and I hope to have her again for another course.

Charlotte's lecture on nutrition was exceptionally well–prepared and thoughtfully delivered. She stayed on track and maintained a clear focus throughout the lecture, while also incorporating relevant questions and clinical examples that deepened our understanding of the material. I left her lecture feeling more confident because the content was clearly aligned with the textbook and the foundational concepts we needed to understand. I appreciated how she expanded on each point in a way that made the material feel organized, coherent, and easy to study afterward. Her slides and explanations highlighted the essential "need to know" concepts, which made it easier to build a strong foundation in nutrition–related topics.

Though I have never personally interacted with Charlotte, the one time she presented in class was useful to my learning. Her presentation was thorough, yet succinct, and I liked her lecturing style (i.e., practical anecdotes that integrated well with the material). If she chose to be a professor one day, she would make a great one.

Charlotte was an amazing TA, super approachable, knowledgeable, and consistently supportive. Whenever she presented or offered insight, she explained concepts in a clear, engaging, and easy to follow manner that genuinely enhanced my understanding of the material. She created a welcoming learning environment where questions felt encouraged, and her ability to break down difficult topics made a noticeable difference in my learning experience. Overall, her presence in this course was incredibly positive and greatly appreciated.

Yuka Imai

I am honored to recommend **Charlotte Bryand**, my cohort member and a second-year PhD student, for the distinguished teaching assistant award. Since the start of the program, I have worked closely with her and observed her consistent dedication, positive energy, and passion, which have benefited our entire cohort.

Charlotte Bryant inspired me through her intellectual curiosity and genuine passion for nursing. She consistently came to class well prepared, understanding the materials and actively engaging with discussions. She modeled doctoral-level learning by sharing her deep understanding of the readings and asking thought-provoking questions that encouraged critical thinking among peers. Her ability to engage respectfully with diverse perspectives during discussions was particularly outstanding. She listened carefully to other students' ideas and responded thoughtfully with constructive comments that deepened our understanding and fostered intellectual curiosity. Many of our classes relied heavily on discussion, and her presence as a cohort member significantly strengthened my learning experience. Her interests in others' perspectives and her depth of knowledge motivated me to broaden my own academic engagement.

Her leadership during a group project demonstrated her teaching strengths. She proactively guided the group, ensuring all members' ideas were integrated and organizing collective input into a coherent structure. When confusion or disagreement occurred, she facilitated discussions to identify challenges and considered solutions to move forward together. If uncertainty persisted, she reached out to the instructor for clarification, which helped the group regain direction without delay. Her consistent communication, transparency around tasks and deadlines, and willingness to check in with group members fostered a proactive, supportive, and inclusive environment. More importantly, this approach helped all of us better understand the project's objectives, not just project completion, illustrating her strong capacity to enhance the learning environment.

Charlotte Bryant exemplifies the qualities of an exceptional teaching assistant through her intellectual curiosity, proactive engagement, and genuine commitment to collective learning. She creates an environment in which students feel supported, motivated, and encouraged to engage in critical thinking. These qualities are uncommon and have a substantial impact on student learning. I am confident that she is highly deserving of the Distinguished Teaching Assistant Award. Thank you for your time and attention in reading my endorsement.

Sincerely,

Yuka Imai, MSN, RN, PHN
UCLA Joe C. Wen School of Nursing, PhD Student

Distinguished Teaching Assistant — Letter of Recommendation

This award celebrates Teaching Assistants who demonstrate a pattern of effective teaching that incorporates current best practices (e.g., student-centered learning, active learning, inclusive teaching), aims to inspire and challenge students, and supports the success of all students.

Name Jiwon Hur

Briefly describe how you know the nominee. (50 words max)

I had Charlotte as my Teaching Assistant during lectures for two consecutive quarters, N150A (Fall 2025) and N150B (Winter 2026), where I experienced her teaching approach, clarity of instruction, and support for student learning and exam preparation.

In a few sentences, describe a few ways in which the nominee inspired or challenged you or other students in the class. (200 words max)

Charlotte inspired and challenged students by setting clear expectations and encouraging us to approach the material with a deeper level of thinking. Rather than focusing on memorization, she emphasized understanding, application, and clinical relevance, which pushed students to engage more actively with lecture content.

She also challenged students by holding us to high standards while remaining supportive and approachable. Her openness to student feedback at the end of N150A, and her efforts to communicate that feedback to the lead faculty, demonstrated a reflective teaching mindset. The improvements seen in N150B showed students that effective learning environments evolve and that our input could meaningfully shape the course. This motivated students to take greater ownership of their learning and trust the instructional team.

Describe one or two things that the nominee did that you thought were particularly beneficial for your (or other students') learning or understanding of concepts. (200 words max)

One particularly beneficial aspect of Charlotte's teaching was her clarity and organization. She consistently communicated expectations clearly, which reduced confusion and allowed students to focus on learning rather than logistics. This transparency created a supportive and inclusive learning environment where students felt comfortable asking questions.

When Charlotte delivered a lecture in N150A, she presented complex material in a clear, structured way that helped students develop a deeper grasp of the material. She frequently checked for understanding and adjusted her explanations based on student responses, modeling student-centered and active learning practices.

Additionally, Charlotte went above and beyond by hosting a final review session focused on synthesizing key lecture content and preparing students for exams and the NCLEX. Her guidance helped students feel more confident in their understanding and approach to testing, which was especially valuable in a challenging course.

Please share any additional reasons why you believe the nominee is an outstanding candidate for this award. (100 words max)

Charlotte is an outstanding candidate because she consistently prioritizes student success and continuously reflects on how to improve her teaching. Her openness to feedback, commitment to inclusive and effective teaching practices, and willingness to go beyond her required responsibilities demonstrate a genuine dedication to education. She creates a learning environment where students feel supported, challenged, and respected. Charlotte exemplifies the qualities this award seeks to recognize and has had a lasting positive impact on her students' academic and professional development.

Distinguished Teaching Assistant Award
UCLA Teaching and Learning Center
160 Powell Library, Box 956953,
Los Angeles, CA 90095-6953

Re: Nomination of Ms. Charlotte Bryant for the UCLA 2026 Distinguished Teaching Assistant Award

I am pleased to recommend Ms. Charlotte Bryant for the UCLA 2026 Distinguished Teaching Assistant Award. As the teaching assistant for Public Health Nursing (N171) in Spring 2025, Ms. Bryant demonstrated exceptional professionalism, strong technical skill, and a deep commitment to student learning. Her contributions strengthened both course delivery and student performance, and she distinguished herself as one of the most capable and responsive teaching assistants I have had the pleasure to supervise.

N171 is a demanding six-unit course that integrates theoretical instruction with an intensive clinical practicum conducted across seven community organizations. With approximately seventy Master's Entry Clinical Nurse students, the course relies on applied learning, group-based interventions, and community assessments rather than traditional examinations. This instructional model requires a teaching assistant who can manage complex systems, anticipate student needs, and facilitate learning in fast-moving, practice-based environments. Ms. Bryant excelled in every dimension of this role.

One of her greatest strengths was her ability to connect course concepts to the realities of nursing practice. During a community assessment workshop, several student groups struggled to interpret epidemiologic data and define meaningful priorities. Drawing on her clinical background, Ms. Bryant guided them through identifying risks and selecting feasible, evidence-informed interventions. Students later reported that her explanations significantly deepened their understanding of population health and renewed their engagement during the demanding final quarter of the program. Her ability to translate theory into practical insight made a measurable difference in student learning.

Ms. Bryant also played an essential role in supporting equitable access to the course. When students faced illness or environmental disruption, she facilitated virtual participation quickly and effectively. Her calm, clear, and supportive communication helped students remain

engaged and allowed the course to run smoothly despite unexpected challenges. In addition, she assisted students who struggled with medication mathematics, guiding them toward a firmer understanding of both the calculation process and its clinical implications. Her efforts directly strengthened student competence in this essential patient-safety skill.

Throughout the quarter, Ms. Bryant demonstrated sound judgment, professionalism, and a respectful, student-centered approach. She maintained appropriate boundaries, modeled the highest standards of nursing professionalism, and served as an approachable role model for students who saw in her a clear and attainable example of clinical and academic excellence. Her presence enriched the learning environment and enhanced the quality of instruction for all students.

For these reasons, I strongly and wholeheartedly recommend Ms. Charlotte Bryant for the UCLA Distinguished Teaching Assistant Award. Her performance in N171 was exemplary, and she contributed meaningfully to student growth, academic integrity, and the overall success of the course.

Sincerely,

Dorothy J. Wiley, PhD, MPH, RN, FAAN
Professor and Faculty Executive Chair
dwiley@sonnet.ucla.edu

Distinguished Teaching Assistant — Letter of Recommendation

This award celebrates Teaching Assistants who demonstrate a pattern of effective teaching that incorporates current best practices (e.g., student-centered learning, active learning, inclusive teaching), aims to inspire and challenge students, and supports the success of all students.
